Brushguard gutter guard

Ideal for collecting water for a tank, pool or spa. Less dust and debris is stirred up when water enters the gutter. brushguard allows the water to run down the bristles and "soft fall" into the gutters.

Water flows through the bristles even when there are leaves on them. In the worst conditions water continues to filter through.

Conventional single plane gutter guard

Any water that does get through traditional gutter protection, stirs up the debris creating a sludge which increasing the chance of contaminated water & rusting gutters.

Leaves can form a seal over single plane gutter systems making it less effective. Water flows over the leaves and off the edge of the gutter.

Brushguard is available in one metre lengths to suit most gutter profiles. Check which profile best matches the gutter. To select the correct one, note the front height and bottom width of the gutter.

Profiles (most common)

Hi-front quad	Suit 150 mm (6") quad	Square front & Mini-line 110 front	Square front 125mm base
			
Part No: BG110Q	Part No: BG125Q	Part No: BG125R	Part No: BG110R

FITTING INSTRUCTIONS

For best results, clean gutters of debris & silt then slide the Brushguard in end to end. At corners bend to suit, at the end or a stop cut to size with wire cutters, always use silicon over any cuts made in the wire. There is no need to adjust tiles or cut back the roof sheeting as Brushguard can be pushed through the gap of just 20mm and the bristles will spring back to do their work of protecting the gutters. No existing gutter guard can stop dirt and dust building up as silt in the bottom of your gutters. Silt holds moisture and if not flushed out causes rapid corrosion of your gutters, so ease of access for cleaning is essential. With Brushguard simply lift out when necessary, shake the brush hose and flush out the silt and replace. It's really that easy!
